

UBER RIDE ANALYTICS

Power BI Dashboard — Student Task Brief

Build a modern, interactive business intelligence dashboard that analyzes ride volume, vehicle performance, revenue, cancellations, and customer/driver ratings.

148.77K	65.96%	25%	4.40+
Total Bookings	Success Rate	Cancellation Rate	Customer Rating

PROJECT OBJECTIVE

Your task is to recreate the dashboard described in this document using Power BI. Focus on clean data modeling, meaningful DAX measures, interactive filters, professional visual design, and business-oriented insights. Do not simply reproduce charts—make the dashboard easy for a manager to understand and explore.

EXPECTED OUTPUT

- 1 Power BI report (.pbix)
- 5 strategic dashboard views/pages
- Interactive slicers and cross-filtering
- KPI cards and business-focused visuals
- DAX measures for the required metrics
- Final dashboard with a clean modern UI

Recommended theme: modern mobility / analytics — spacious layout, consistent typography, subtle backgrounds, clear KPI hierarchy, and minimal visual clutter.

01 • DATA PREPARATION

Import the Uber ride dataset into Power BI and prepare it for analysis. Validate data types, remove obvious duplicates, handle blanks appropriately, and make sure date/time fields can support time-series analysis.

Field Group	Required Columns
Date & Time	Date, Time
Booking	Booking ID, Booking Status, Booking Value
Customer / Vehicle	Customer ID, Vehicle Type
Locations	Pickup Location, Drop Location
Timing	Avg VTAT, Avg CTAT
Cancellations	Cancelled Rides by Customer, Reason for cancelling by Customer
Driver Cancellations	Cancelled Rides by Driver, Driver Cancellation Reason
Incomplete	Incomplete Rides, Incomplete Rides Reason
Ride	Ride Distance
Ratings	Driver Ratings, Customer Rating
Payment	Payment Method

Task 1 — Data Cleaning Checklist

- ☐ Set correct data types for Date, Time, numeric fields, ratings, booking value, and ride distance.
- ☐ Check Booking ID uniqueness and identify duplicate records.
- ☐ Review blank/null values in ratings, cancellation reasons, and payment method.
- ☐ Standardize Vehicle Type, Booking Status, Payment Method, and cancellation reason labels.
- ☐ Create a proper Date table for time intelligence.

Task 2 — Data Model

- ☐ Create a clean model with a dedicated Date table.
- ☐ Create appropriate relationships and avoid unnecessary many-to-many relationships.
- ☐ Use descriptive measure names and organize measures into logical folders if desired.

02 • KPI & DAX MEASURES

Create measures rather than hard-coding values in visuals. The following metrics should be available for use across the report.

KPI	Target Output / Definition
Total Bookings	Count of Booking ID
Completed Rides	Count of completed/successful bookings
Success Rate	Completed Rides ÷ Total Bookings
Cancelled Bookings	Customer + Driver cancellations / applicable cancelled status

KPI	Target Output / Definition
Cancellation Rate	Cancelled Bookings ÷ Total Bookings
Customer Cancellation Rate	Customer cancellations ÷ Total Bookings
Driver Cancellation Rate	Driver cancellations ÷ Total Bookings
Total Booking Value	Sum of Booking Value
Average Ride Distance	Average of Ride Distance
Average Driver Rating	Average Driver Ratings
Average Customer Rating	Average Customer Rating

03 • VIEW 1 — OVERALL PERFORMANCE

Task 1

- ☐ Create a time-series visual showing ride volume by Date/Month.

Task 2

- ☐ Create a booking-status breakdown using a doughnut/pie chart.

Task 3

- ☐ Add KPI cards for Total Bookings, Completed Rides, Success Rate, and Cancellation Rate.

Task 4

- ☐ Add slicers for Date, Vehicle Type, Booking Status, and Payment Method.

Task 5

- ☐ Make the page answer: How are bookings performing over time and what proportion succeeds vs. cancels?

04 • VIEW 2 — VEHICLE TYPE ANALYSIS

Task 1

- ☐ Compare all vehicle categories by Total Bookings and Successful Bookings.

Task 2

- ☐ Create a Top 5 Vehicle Types by Ride Distance visual.

Task 3

- ☐ Show Average Distance and Total Distance by vehicle type.

Task 4

- ☐ Use a matrix/table for detailed vehicle performance.

Task 5

- ☐ Highlight the leading vehicle category by total bookings.

05 • VIEW 3 — REVENUE ANALYTICS

Task 1

- ☐ Create a stacked/clustered bar chart for revenue by Payment Method.

Task 2

- ☐ Create a Top 5 Customers leaderboard using Total Booking Value.

Task 3

- ☐ Create a daily ride-distance distribution visual/histogram.

Task 4

- ☐ Add Total Booking Value, Average Booking Value, and Total Distance KPI cards.

Task 5

- ☐ Make the page answer: Where does revenue come from, who are the highest-value customers, and how much distance is being covered?

06 • VIEW 4 — CANCELLATION INTELLIGENCE

Task 1

- ☐ Create a customer cancellation reason pie/doughnut chart.

Task 2

- ☐ Create a driver cancellation reason pie/doughnut chart.

Task 3

- ☐ Show customer vs. driver cancellation KPIs.

Task 4

- ☐ Identify the most common cancellation reason in each category.

Task 5

- ☐ Use tooltips or drill-through where helpful to explain cancellation patterns.

07 • VIEW 5 — RATING & QUALITY

Task 1

- ☐ Create average Driver Rating by Vehicle Type.

Task 2

- ☐ Create average Customer Rating by Vehicle Type.

Task 3

- ☐ Use card or bar visuals to make rating differences easy to compare.

Task 4

- ☐ Identify the highest-rated vehicle category for drivers and customers.

Task 5

- ☐ Keep rating visuals simple and focused on benchmarking quality.

08 • VEHICLE FLEET BENCHMARK

Use the following benchmark figures as a reference while validating your dashboard. Your Power BI calculations should reproduce the dataset's intended business metrics.

Vehicle Type	Total Bookings	Success	Avg Distance	Total Distance
Go Mini	10.34M	9.41M	25.99 km	482K km
Go Sedan	9.37M	8.54M	25.98 km	433K km
Auto	12.88M	11.73M	25.99 km	602K km
eBike/Bike	11.46M	10.44M	26.11 km	537K km
UberXL	1.53M	1.41M	25.72 km	72K km
Premier Sedan	6.28M	5.73M	25.95 km	292K km

09 • BUSINESS INSIGHTS TO IDENTIFY

- Peak ride volume appears around July–August; investigate seasonal demand.
- A notable February dip should be visible in the time-series analysis.
- Auto leads total bookings in the provided benchmark.
- UPI is the strongest payment-method revenue contributor in the reference analysis.
- Daily operational distance is broadly consistent around the 6K–8K km range.
- Customer ratings remain around 4.40–4.41 across vehicle categories.
- Driver ratings are slightly lower, around 4.23–4.24.
- A cancellation rate around 25% is a key area for operational improvement.
- Top-value customers should be evaluated for retention opportunities.

10 • QUALITY CHECK & SUBMISSION

- ☐ All visuals respond correctly to slicers and cross-filtering.
- ☐ KPI totals reconcile with the underlying data.
- ☐ No unnecessary charts or duplicated information.
- ☐ Titles clearly communicate the business question being answered.
- ☐ Numbers use appropriate formats (K/M, %, currency, km, ratings).
- ☐ Dashboard is readable on a standard laptop screen.
- ☐ Consistent fonts, spacing, alignment, and visual hierarchy are used.
- ☐ Final .pbix file is saved and ready for review.

FINAL CHALLENGE

Add one executive summary area that explains the 3 most important findings from your own analysis. Do not copy the reference insights word-for-word—derive them from your visuals and measures.
